*Detailed Action*

*Restriction/Election*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, drawn to a method for chemical compound development project management, classified in class 707, subclass 100.
- II. Claims 18-40, drawn to a system, computer readable medium, and interface for target chemical compound development, classified in class 702, subclass 19.
- III. Claims 41-43, drawn to a computer readable medium comprising a project header data structure with an identifier and a synthesis plan data structure for referencing, classified in class 211, subclass 41.12.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and [II and III] are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the inventions of Groupings I and [II and III] are distinct inventions because the method of Group I could be done manually.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions in

Art Unit: 1631

Groups II and III are directed to different entity types that are not required one for the other and/or achieve different goals. For Group II, is directed to molecule and synthesis databases for synthesis of a particular target molecule without referencing which differs from Group III.

Group III is directed to a computer readable medium comprising a project header data structure with a project identifier and a data structure containing synthesis plans with molecular identifiers for referencing which is not found in the other Groups.

The completely separate entity types of the invention Groups are often separately characterized and published in literature, thus adding to the search burden if all Groups were examined together. Thus, Groups I, II, and III are independent and/or distinct invention types for restriction purposes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
